

CLOUD SOLUTIONS AND SERVICES

pg 1 of 2

STORServer Cloud Solutions and services provide secure, reliable and scalable data protection. These cloud solutions and services are fully compatible with STORServer's award-winning, custom-built data protection appliances. STORServer provides multiple architectural options around cloud offerings for disaster recovery, as well as direct to cloud services for automated backup, archive and disaster recovery.

Disaster Recovery to a Customer Owned Data Center (Private Cloud)

- Provides off-site disaster recovery of backup and archive data
- Replicate only deduped and compressed data
- Data is owned by the customer – no relying on third party vendors for access or security
- DR target appliance automatically provides failover restores if data isn't available in the primary appliance

Disaster Recovery to Cloud Providers (Public Cloud)

- AWS, MS Azure, IBM's SoftLayer® and other OpenStack SWIFT
- Provides off-site disaster recovery of backup and archive data
- Automated replication from on-premise STORServer appliance
- Paid subscription according to storage requirements
- An optional virtual appliance provides the ability to perform restores in the cloud

STORServer leverages decades of expertise, and over one thousand installations, to ensure that a customer's environment performs as expected. This knowledge allows for STORServer to customize a turn-key solution that fits into the customer's environment, taking into account factors such as new software implementations, available bandwidth (WAN) to successfully complete replication, mandated recovery point objectives (RPO) and recovery time objectives (RTO). We work with a customer's total vision for data protection to provide a customized data protection environment.

Disaster Recovery to a Private Cloud – Available to existing IBM® Spectrum Protect™ (Tivoli Storage Manager), Commvault® Simpana® (Commvault Data Platform) and STORServer installations, Disaster Recovery to a Private Cloud includes a STORServer Appliance for automated disaster recovery that is configured to your enterprise's daily backup requirements. Customers who purchase this cloud offering typically want to move away from tape or currently don't have a disaster recovery solution.

Disaster Recovery to a Public Cloud – Available to existing IBM Spectrum Protect™ (Tivoli Storage Manager), Commvault® Simpana® (Commvault Data Platform) and STORServer installations, Disaster Recovery to a Public Cloud includes a storage-based (cost per GB/TB) fee for copying and storing backup or archive data to a certified STORServer public service provider. Customers who purchase this cloud offering don't require a dedicated Cloud Appliance. Customers may choose to host a virtual appliance in the public cloud to achieve a shorter recovery time objective (RTO). This option allows restores to take place in the public cloud for a fast RTO that doesn't require bringing data across a WAN.

CLOUD SOLUTIONS AND SERVICES

pg 2 of 2

Backups Direct to a Public Cloud

- Available to any platform – no on-site hardware implementation required
- Provides off-site backup, archive and disaster recovery of all data
- Paid subscription according to storage requirements – no large upfront capital expenditure

Backup, Archive and Disaster Recovery to a Public Cloud – Available to any facility and does not require an IBM TSM, a Commvault or a STORServer installation. However, purchase and installation of software clients and database agents is required. Like Disaster Recovery to a Public Cloud, this service includes a storage-based (cost per GB/TB) fee for copying and storing backup or archive data to a certified STORServer public service provider. Customers who purchase this cloud offering typically want a completely “hands-off” solution for backup, archive and disaster recovery and are looking to minimize their on-premise footprint.

ABOUT STORSERVER

STORServer is a leading provider of data protection solutions and offers the only enterprise data backup appliance that is built to order. Each backup appliance solution is tailored to the customer’s unique environment to simplify management of complex backup, archive and disaster recovery needs. STORServer’s appliances feature enterprise class data backup, archive and disaster recovery software, hardware, services and U.S.-based customer support.
