

### PLATFORM SAVVY

- Full or tablespace backup of a database while it is online or offline
- Full database restores either online or offline
- Tablespace restores while database is offline
- Backups of archive log files
- Block-level incremental backup of changed database pages
- Oracle backups with virtually no application impact
- Advanced Encryption Standard (AES) 256-bit encryption
- Transport Layer Security (TLS) protocol for secure communications

### REDUCES DOWNTIME

- Automated processes
- Safely secures data to offline storage while continuing to run mission-critical applications
- Dramatically reduces application and system downtime
- Incremental backup saves time and resources
- Online backup and restore

### HOT BACKUP FOR ORACLE DATABASES ON OPENVMS

STORServer® Data Protection (SDP) for Oracle® provides a centralized backup and archive solution for your Oracle databases. Running on the OpenVMS® platform, SDP provides the interface between the Oracle Recovery Manager (RMAN) utility and IBM® Tivoli® Storage Manager (TSM), allowing RMAN to back up and archive database content to your TSM server. This powerful combination of SDP, RMAN, and TSM ensures superior protection of your irreplaceable application data.

SDP for Oracle is designed to be “application-aware.” Data protection features are closely integrated with the Oracle databases. Your Oracle database server can continue to execute mission-critical applications while automated data protection occurs. Data is safely secured in TSM storage and can be restored as needed.

Adding SDP for Oracle to your database management toolbox not only saves time and money, but also provides peace of mind, knowing that the application data stored in your Oracle databases is protected and recoverable.

#### System Requirements

##### Operating System:

- OpenVMS Alpha 7.2 or newer
- OpenVMS I64 8.2-1 or newer

##### Database:

- Oracle 8i - Version 8.1.7 or newer
- Oracle 9i
- Oracle 10g
- Oracle 11g

##### TSM Server:

- TSM Server Version 6.4 or newer
