

SAVES TIME AND RESOURCES

- Deploy clients and begin backing up data the same day.
- Optional virtual machine and database agents are available.
- Simple UI Management Console.
- Centralized management.
- Automated daily processes.
- Scale as you grow.
- Policy-based data retention.
- Flexible versioning (number and life).
- Point-in-time copies of regulated data on any media type.
- Storage virtualization and data deduplication are included.
- Incremental or progressive backups eliminate constant and redundant copying.
- Reduces costs through hierarchical virtual storage pool technology.
- Condenses duplicate bits, bytes, blocks and files to reduce network requirements and minimize use of storage media.

COST-EFFECTIVE, EASY-TO-USE, FULLY INTEGRATED BACKUP

The STORServer Hybrid Appliance (HA) is designed to use qualifying, customer-supplied hardware to provide a fully integrated STORServer solution.

Affordably priced, the STORServer Hybrid Appliance series aggressively competes and wins against any similar sized backup solution.

STORServer's intuitive user interface, STORServer Console (SSC), makes daily management a snap across your enterprise, from a single location. The solution efficiently backs up multiple operating systems and email applications plus supports most popular database platforms (requires optional database agents). Backups and restores can take place across all network connections (NAS, SAN, LAN, WAN) from hundreds of storage devices.

STORServer's support puts STORServer expertise, the best in the industry, at your fingertips.

Ready-To-Go Appliance

- STORServer's software technology bundle is loaded and fully integrated with your qualifying hardware for reliable, easy-to-use, expedient daily administration.
- Backup data across multiple platforms and locations including virtual machines, local and remote devices.
- Centralized management of all devices from one location.
- Supports most operating systems, applications and database technologies.
- Single point of contact for warranty and support of all software-related concerns.

Each Appliance

- Provides disk-to-disk-to-disaster recovery (DR) copy to disk, tape, cloud or STORServer Appliance.
- Uses the same, Enterprise or Basic Tivoli Storage Manager software (except Instant Restore Appliance (IR)).
- Scales for future growth and maximim return on investment.

- Enterprise and Mid-market Companies
 - Data Centers
 - Branch Offices
 - Remote Users
 - All Industries - Largest sectors include:
 - Automotive
 - Professional Services
 - Healthcare
 - Education
 - Government
 - Manufacturing
 - Retail
 - Existing TSM Installations
 - Frees System Admins for Other Tasks
 - SMBs with Limited IT Resources
 - Delivers Value In
 - Proven Technology
 - Robust, Scalable Architecture
 - Long-term Benefits
 - Reality-based Return On Investment
 - Vendor/Partner Relationships
1. The HA software is installed on your qualifying hardware by a STORServer technician at your site.
 2. Client software is installed on servers and workstations.
 3. Data flows from local or network storage into online storage pools.
 4. Online, on-site pools copy to any one of three off-site disaster recovery pools.
 5. After the initial full backup, subsequent backups are incremental forever capturing new and changed data only.
 6. When a restore is required, the STORServer database produces the list of files to restore along with their locations in local and off-site storage pools.
 7. All versions of files (current and older) are available for immediate restore.
 8. In the event of a disaster (loss of data), copies of all versions of all files are available in the optional off site disaster recovery pool for restoration.
